Internal

Measuring workflows is **not the product**. It's a **means**.
It's a sales and trust mechanism, not the end goal

New tech x old processes = old process.
New tech x fashion OS = new business opportunity

The EnhanceThat way:

- we measure
- we build
- we keep you supported/ahead of the game

Clients

We work with small brands to learn,
mid size brands to grow,
and large brands when conditions are right.

Strategic small brands
€5M–€30M (eg. Stieglitz)

This lane is about learning, not volume.

Smaller brands move fast, allow end-to-end experimentation, and give direct access to creative and operational leadership.

They help us test new workflows, AI usage, and system ideas in real conditions.

Role: experimentation and future proofing
Rules: tight scope, clear learning goals, high reuse potential

Core growth market
Mid size brands (€100M–€600M)

This is our primary growth engine.

These brands have invested in digital tools but struggle to make them work together in daily operations.

Ownership is clearer, sales cycles are shorter, and real system change is possible.

Role: scale revenue and long-term partnerships
Model: assessment → build → support
Outcome: repeatable systems and compounding value

Large enterprise
€600M+ (opportunistic)

Large brands are engaged selectively when ownership, urgency, and scope are clear.

They are not the backbone of our growth due to long cycles and political complexity.

Role: high-impact, selective work
Risk: slow decisions, diluted impact

Why EnhanceThat

Y: Likes to have this! This needs a good thought! this I think would be a key!

Expertise across tech and process

Proven results

Partnerships

We sit between advice and software.

We exist to reduce decision risk.

Traditional Consulting

- Starts with recommendations
- Often tool or framework driven
- they dont execute only advise
- Impact measured late or not at all

Problem: Decisions are abstract. Ownership is unclear.

Software & Platforms

- Starts with a product
- Assumes workflows will adapt
- ROI promised upfront
- Impact depends on adoption

Problem: Tools are bought before clarity exists.

EnhanceThat

- Starts with how work actually happens
- Measures impact before change
- Models options and tradeoffs
- Supports decisions first, delivery second

Result: No risk. Better decisions. Faster result

EnhanceThat

We change how fashion is made

Fashion business is in rough weather

Capital is locked in inventory

Margins are corrected through discounting

Demand is guessed months ahead

Creativity is used to chase volume, not value

Fashion is structurally inefficient

Why change slows down

New technology is layered onto old processes.
So the system behaves exactly the same.

new tech x old process = old business

When the technology changes the winners change too

amazon

shein

supply/produce/deliver → sell

risk margin & pressure

sell → supply/produce

strong brand concepts

control risks

new fashion OS

what do winners do?

They **decide later**

They test small and **scale fast**

They **act on demand** in season

They **protect margin by reducing risk**

good

EnhanceThat

Builds **Fashion OS** with brands

Example

digital creation that drives decisions

supply follows proven demand

brands stay continuously connected to customers

narrative to 2030

2026
Measurement first
We become the default reference for measuring ROI of fashion process and tech change.
Assessments scale. Data compounds.

2027
System builds
We sell limited Fashion OS build slots to brands ready for system change.

2028–2029
Adoption through evidence
Benchmarks emerge. Adoption follows evidence, not hype.

2030
Authority
EnhanceThat is the authority behind Fashion Operations Intelligence.
Fashion OS is the reference model built on it.

our north star

Pricing
From insight to system change

Step	Offering	Purpose	Price
1	**Assessment Snapshot**	Fast clarity and direction	**€10k**
2	**Automation Assessment**	Measure impact and ROI	**€30k–€50k**
3	**Integration & Automation**	Proven system improvements	**€80k–€250k**
4	**Fashion OS Builds**	Operating model change	**Limited slots from 2027**

Principle
Every step earns the right to the next.
We don't build before impact is measured.

> *We price intelligence, not effort.*

Think of it like a family road trip

You don’t start driving blind.

You look up best route first.
You decide.
Then you go.

How EnhanceThat works

We help fashion brands reduce risk and improve margins by measuring where process and technology change actually delivers impact.

We don’t start with tools - we start with intelligence.

Assessment Snapshot
€10k · 2 weeks

A fast diagnostic to create alignment and direction.

- Identifies where processes break
- Highlights where technology may create value
- Clarifies whether deeper analysis is needed

Directional by design.

Automation Assessment

€30k–€50k · 3–4 weeks

Our core intelligence product.

We measure how your organisation actually works and quantify the impact of system change before anything is built.

- Decision and workflow mapping
- Impact ranges on time, cost, and margin
- Prioritised integration and automation roadmap
- Contribution to cross-brand benchmarks

This is where investment decisions become evidence based.

Integration & Automation

€80k–€250k

We design and build only what has proven impact.

- Targeted system improvements
- Reduced manual work
- Faster decisions
- Measurable operational gains

No speculative builds.

Fashion OS Builds

From 2027 · Limited availability

Fashion OS is the operating model built on intelligence.

These builds are selective and high impact, designed for brands ready to rethink how they operate, not just how tools connect.
